

1.Create a table listing 3 types of printers, 2 types of scanners, and 2 types of webcams, and for each, write one real-life use case (for example: 'Inkjet printer – printing college assignments').

| Device Category | Type                | Real-Life Use Case                                 |
|-----------------|---------------------|----------------------------------------------------|
| Printer         | Inkjet Printer      | Printing college assignments and color photos      |
| Printer         | Laser Printer       | Printing office reports and documents quickly      |
| Printer         | Dot Matrix Printer  | Printing invoices and receipts in businesses       |
| Scanner         | Flatbed Scanner     | Scanning certificates, photos, and documents       |
| Scanner         | Handheld Scanner    | Scanning barcodes in shops and warehouses          |
| Webcam          | Built-in Webcam     | Attending online classes and video meetings        |
| Webcam          | External USB Webcam | Live streaming and professional video conferencing |

2. Draw a labeled diagram showing how a typical home printer connects to a laptop or PC, including the connection interface used (USB, Wi-Fi, or Bluetooth).

## Connection of a Home Printer to a Laptop / PC

A typical home printer can connect to a laptop or PC using USB, Wi-Fi, or Bluetooth.

3. List three different connection interfaces (such as USB, Wi-Fi, Bluetooth) used by peripherals like printers, scanners, and webcams, and for each, name one advantage and one disadvantage.<br><br><em><strong>Hint:</strong> Think about speed, convenience, and compatibility.</em>

| Connection Interface       | Advantage                                                                         | Disadvantage                                                                  |
|----------------------------|-----------------------------------------------------------------------------------|-------------------------------------------------------------------------------|
| USB (Universal Serial Bus) | Fast data transfer speed and reliable connection.                                 | Requires a cable, which limits mobility.                                      |
| Wi-Fi                      | Wireless connection allows devices to connect from anywhere within network range. | May experience slower speed or connection issues due to network interference. |
| Bluetooth                  | Easy wireless connection without needing a router.                                | Shorter range and generally slower than USB or Wi-Fi.                         |

**4.** Pick any one device you use at home or college (printer, scanner, or webcam). Write step-by-step instructions for how you would connect it to your computer, including what cable or wireless method you would use and any setup steps required.

#### **Steps to Connect a Webcam to a Computer**

1. **Turn on the computer** and log in to the operating system.
2. **Locate an available USB port** on the laptop or desktop computer.
3. **Connect the webcam's USB cable** to the USB port.
4. Wait a few seconds for the computer to **detect the webcam automatically**.
5. If required, **install the webcam driver or software** from the manufacturer's website or the provided installation CD.
6. Open the computer's **Camera application** to check whether the webcam is working properly.
7. Adjust the webcam position for a clear view.
8. Open a video conferencing application such as Zoom, Google Meet, or Microsoft Teams.
9. Go to the application's settings and **select the connected webcam** as the video input device.
10. Test the video and start using the webcam.
