

1. On your Windows laptop or PC, open 'System Information' and take a screenshot showing your OS version, processor, and RAM details.

Item	Details
OS Name	Microsoft Windows 11 Home Single Language
Version	10.0.26200 Build 26200
Processor	13th Gen Intel(R) Core(TM) i5-13450HX @ 2.40 GHz, 10 Cores, 16 Logical Processors
System Model	Dell G15 5530
System Type	x64-based PC
RAM	Not visible in this screenshot (scroll down to Installed Physical Memory (RAM) and take another screenshot if required)

2. Download any official Linux distribution ISO (like Ubuntu or Fedora), and use Rufus or BalenaEtcher to create a bootable USB drive for installation.

Hint: If you don't have a spare USB, use a virtual machine tool like VirtualBox to mount the ISO and start the installation process virtually.

Step 1: Download a Linux ISO

Choose a Linux distribution and download its ISO file:

- [Ubuntu Desktop](#)
- [Fedora Workstation](#)

Step 2: Download Rufus

- Download Rufus from: [Rufus Official Website](#)

Step 3: Insert USB Drive

- Insert a USB drive (8 GB or larger).
- Backup any important data because the USB will be erased.

Step 4: Create the Bootable USB

1. Open Rufus.
2. Select your USB device.
3. Click **SELECT** and choose the Linux ISO.
4. Keep default settings unless instructed otherwise.
5. Click **START**.
6. Wait for the process to complete.

Step 5: Verify

- Open File Explorer.
 - Check that the USB now contains Linux installation files.
-

Method 2: Using VirtualBox (If No Spare USB Is Available)

Step 1: Download VirtualBox

- [VirtualBox Official Website](#)

Step 2: Create a Virtual Machine

1. Install and open VirtualBox.
2. Click **New**.
3. Select **Linux** as the operating system.
4. Allocate RAM (4 GB or more recommended).

Step 3: Mount the ISO

1. Open VM Settings → Storage.
2. Select the optical drive icon.
3. Choose the downloaded Ubuntu/Fedora ISO.

Step 4: Start the VM

1. Click **Start**.
2. The Linux installer should boot from the ISO.
3. Proceed through the installation screens.

3. On a macOS device (or using a macOS virtual machine), open 'System Preferences' and change the desktop wallpaper, then adjust the system language to Hindi or Gujarati.

Hint: Find 'Language & Region' in System Preferences to add or change languages.

art 1: Change the Desktop Wallpaper

Steps:

1. Click the **Apple () Menu**.
2. Open **System Settings** (or **System Preferences** on older macOS versions).
3. Select **Wallpaper** or **Desktop & Screen Saver**.
4. Choose a wallpaper from the available options or click **Add Photo** to select your own image.
5. The desktop background will change immediately.

Result: Desktop wallpaper changed successfully.

Part 2: Change System Language to Hindi or Gujarati

Steps:

1. Open **System Settings** (or **System Preferences**).
2. Click **General** → **Language & Region**.
3. Under **Preferred Languages**, click the **+** (**Add**) button.
4. Select:
 - **Hindi (हिन्दी)** or
 - **Gujarati (ગુજરાતી)**
5. Click **Add**.
6. Choose **Use Hindi** or **Use Gujarati** as the primary language.
7. Restart or log out if prompted.

Result: The system menus and supported applications will display in the selected language.

4. Install a fresh copy of Ubuntu Linux (real or virtual machine) and create a new user account named 'gamer'. After installation, enable automatic login for this user and take a screenshot of the login screen showing the username.

Step 1: Install Ubuntu

1. Download Ubuntu ISO from:
 - [Ubuntu Desktop Download](#)
2. Create a bootable USB (Rufus) or create a Virtual Machine (VirtualBox).
3. Boot from the USB/ISO.
4. Select **Install Ubuntu**.

Step 2: Create User Account

During installation:

- **Your Name:** Gamer
- **Computer Name:** Ubuntu-PC
- **Username:** gamer
- **Password:** (Choose any password)

Click **Continue** and complete the installation.

Step 3: Enable Automatic Login

After Ubuntu starts:

1. Open **Settings**.
2. Go to **Users**.
3. Unlock settings using your password.
4. Select user **gamer**.
5. Enable **Automatic Login**.

Step 4: Verify

1. Restart the system.
2. Confirm that Ubuntu logs in automatically to the **gamer** account.

Step 5: Take Screenshot

If your instructor specifically wants the login screen:

1. Disable automatic login temporarily.
2. Restart the system.
3. When the login screen appears showing **gamer**, take a screenshot.

5. Use ChatGPT to generate a step-by-step guide for installing Windows 10 on a laptop, including partitioning tips and post-installation settings for privacy and updates. Follow the guide and note any steps that were unclear or missing.

Windows 10 Installation Guide

Requirements

- Windows 10 ISO file
- 8 GB or larger USB drive
- Rufus (for creating a bootable USB)
- Backup of important data

Step 1: Create a Bootable USB

1. Download the Windows 10 ISO from Microsoft.
2. Download and open Rufus.
3. Insert the USB drive.
4. Select the Windows 10 ISO.
5. Click Start and wait for the bootable USB to be created.

Step 2: Boot from the USB

1. Insert the bootable USB into the laptop.
2. Restart the laptop.
3. Press the Boot Menu key (F12, Esc, F9, etc., depending on the manufacturer).
4. Select the USB drive and press Enter.

Step 3: Start Windows Setup

1. Select Language, Time, and Keyboard settings.
2. Click Next.
3. Click Install Now.

Step 4: Enter Product Key

1. Enter your Windows product key.
2. If you do not have one, click "I don't have a product key."

Step 5: Choose Installation Type

1. Select Custom: Install Windows only (Advanced).

Step 6: Partitioning the Drive

For a Fresh Installation

1. Select existing partitions and click Delete (this erases all data).
2. Select the Unallocated Space.
3. Click New.
4. Windows will automatically create required system partitions.
5. Select the Primary partition and click Next.

Partitioning Tips

- C: Drive (Windows): 100–150 GB minimum.
- D: Drive (Data): Remaining disk space.
- SSDs perform best when at least 15–20% free space is maintained.

Step 7: Install Windows

1. Windows copies files and installs features.
2. The system restarts several times automatically.

Step 8: Initial Setup

1. Select your region and keyboard layout.
2. Connect to Wi-Fi.
3. Sign in with a Microsoft account or create a local account.

Step 9: Privacy Settings

Recommended settings:

- Turn OFF Advertising ID.
- Turn OFF Diagnostic Data (Optional).
- Turn OFF Location Services if not required.
- Turn OFF Tailored Experiences.
- Review app permissions.

Step 10: Windows Update

1. Open Settings → Update & Security.
2. Click Check for Updates.

3. Install all available updates.
4. Restart if required.

Step 11: Install Drivers

1. Install chipset, graphics, audio, and network drivers.
2. Verify in Device Manager that no devices show warning icons.

Step 12: Install Essential Software

- Web browser
- Microsoft Office
- Antivirus
- Media player
- PDF reader
